The Story

Nestled in the picturesque Transylvanian mountains, at an elevation of approximately 5,000 feet, stands a traditional Romanian livestock feed barn, a stoic monument to time and resilience. This nearly two-century-old structure bears witness to the age-old farming practices of a community that has called the mountainous terrain home for generations.

Built with a keen understanding of the land, this barn's original roof, weathered and worn, succumbed to the forces of a relentless storm several generations ago. In an act of resourcefulness and determination, the farmers replaced it with a sturdy slate roof, a durable shield against the whims of the high-altitude weather that characterizes this region.

The barn's primary purpose is evident in its design—a sanctuary for feeding and sheltering the high country cow herd during the challenging winter months. A long trough, hewn from seasoned oak, runs the length of the barn, providing sustenance to the livestock that rely on it for nourishment during the snow-laden days. The air is filled with the comforting aroma of hay and the sounds of contented munching as the cows gather around the trough.

One of the distinctive features of this barn is its strategic location in the landscape. Positioned at a crucial elevation, it serves as a key hub for the seasonal migration of the livestock. During the warmer months, the cows are skillfully moved along the ridgelines, a time-honored tradition that facilitates the transfer between pastures. The rhythmic sound of hooves on mountain trails echoes the ancestral wisdom of the farmers, who navigate the contours of the land with an innate understanding of the optimal grazing grounds.

Surrounded by the grandeur of the Transylvanian mountains, this barn embodies the resilience of the farming community and their harmonious coexistence with nature. The slate roof glistens in the sunlight, reflecting the enduring spirit of those who have tended to their herds within these walls for generations. As the cows traverse the mountain paths, the barn stands as a silent guardian, a connection between the rich history of the past and the undulating landscapes of the present, etching the story of Transylvanian mountain farming into the very fabric of the land.

Three Forks Wood Reclamation

Three Forks overseas reclaimed wood provides exotic beauty, one-of-a-kind documented history and heritage, and incredible photographs of the discovery and disassembly of the original wooden structure for the next owner to share with family and friends.

We save the wood from structures that are at the end of their days and pass the wood, as well as its story in both pictures and words, to its next purpose, fulfilling the spirit of environmentalism to recycle and reuse.

Financing: 50% deposit, 50% due upon delivery to customer-specified location.

Regulatory/Logistics

Compliance: USDA APHIS permits, adherence to import regulations.

Logistics: In-house coordination from site to delivery ensures a smooth process.

Quality Assurance: Kiln heating to meet all regulatory standards; contractual agreement ensures expectations of product in quantity and quality.

Insurance: Material insurance policy included in total cost for any loss or damage while in-transit

Legal: Custom contract developed by third-party lawyer for clear agreement on package quality, quantity, and timeline

Project Deliverables

Each delivery includes a comprehensive documentation package, sharing the story and history of the reclaimed wood.

- Large landscape-style high-quality canvas picture of the structure in its original location
- Professional coffee table-style book with photographs and documentation of the site and area
- Unique accoutrement from the site for an added connection and conversation piece.
- Secure access to the Three Forks digital vault for all site photography and documentation
- Certificate Blockchain encrypted NFT of Certificate of Authenticity for provenance of all wood, pictures, and composed stories related to the site
